Drive Alone - All Employees

One Way VMT per Employee - All Employees

Site History and Goal

Cycle	Drive Alone - All	Drive Alone - CTR Affected	VMT / Employee - All	VMT / Employee - CTR Affected
2007-08	77.5%	77.3%	8.9	8.7
2009-10	82.8%	84.9%	9.9	9.4
Goal for 2011-12	69.8%	69.6%	7.7	7.6
Percent Change From First Survey	6.8%	9.8%	11.2%	8.0%

Note: An "affected" employee is a person who works full-time and who begins a regular work day at a single worksite between 6 am and 9 am on two or more weekdays for at least twelve continuous months.

** Goal is an estimate only, based on an assumed 10% reduction in drive alone rate and a 13% reduction in VMT/employee from the first survey conducted from 2007 to 2010. However, jurisdictions can set higher goals, and may set different goals for individual worksites. Goal is calculated off of the first survey without fill-in applied. Drive alone rate includes one-person motorcycles.

Employer ID: E30452

Comparison Between Rates With and Without Fill-In

The survey response rate is indicated on Page 1. To encourage a response rate of at least 70%, additional drive alone trips are added to survey results for worksites with a response rate of less than 70%. For these worksites it is assumed that non-responding employees between the actual response rate and 70% drive alone 5 days a week. These additional trips represent the "Fill-In" applied. Note that fill-in is not applied to a worksite's first survey in the 2007 to 2012 cycle (their baseline survey).

	2007-2008	2009-2010
Drive Alone - All Employees*	77.5%	82.8%
VMT/Employee - All Employees	8.9	9.9
Drive Alone - CTR Affected Employees*	77.3%	84.9%
VMT/Employees - CTR Affected Employees	8.7	9.4

* Drive alone rate includes one person motorcycles.

Congratulations! You achieved a survey response rate of 70% or higher on this survey. Fill-in comparison for previous surveys, if applicable, are included in the chart above.

GHG Emissions: Total for Drive Alone, Carpools, Vanpools

Annual Greenhouse Gas Emissions (Metric Tons CO₂e) for Roundtrip Commute*

	2007-2008	2009-2010
Emissions for Surveyed Employees	210	129
Estimated Emissions for Total Employment	303	254

* Estimated based on VMT from commuters driving alone, carpooling, vanpooling, or motorcycling, without fill-in applied.

Bus Transit Passenger Miles and Rail Transit Passenger Miles*

Annual Transit Passenger Miles (includes Roundtrip Commute)	2007-2008	2009-2010
Bus Annual Passenger Miles - Surveyed Employees	16,600	40,900
Bus Annual Passenger Miles - Estimated for Total Employment	23,945	80,459
Train/Light Rail/Streetcar Annual Passenger Miles - Surveyed Employees	0	0
Train/Light Rail/Streetcar Annual Passenger Miles - Estimated for Total Employment	0	0
Ferry Annual Passenger Miles - Surveyed Employees	0	0
Ferry Annual Passenger Miles - Estimated for Total Employment	0	0

* Transit passenger miles can be used to gauge changes in transit usage, and also to calculate greenhouse gas emissions from transit commute trips. However, emissions attributable to transit vary widely, depending on the efficiency/energy source of transit vehicles and transit vehicle passenger load (typically ranging from 0.1 to 0.9 pounds CO₂e emissions/passenger mile). Employers are strongly encouraged to contact their local transit agencies for more precise information on GHG emissions for their transit trips. If nothing else is available, the value of 0.47 pounds (0.00021 metric tons) per passenger mile can be used to estimate CO₂e emissions for bus transit, and 0.39 pounds (0.00018 metric tons) CO₂e emissions per passenger mile for train/light rail/streetcar.
